

Vignette[®] Portal

Product Datasheet

Presentation Services that Deliver

Vignette Portal is a high-performance solution to create Web sites with rich content and applications, enabling personalized interactions with customers, employees, suppliers and partners. It is uniquely able to serve WWW sites that have high performance and scalability requirements in addition to classic intranet or business process portal implementations.

As a flexible presentation vehicle for a number of Vignette and Open Text offerings, Vignette Portal is designed to provide a fast, powerful and cost effective way to help organizations efficiently create, deploy and manage one or more sites using a single integrated solution.

Key capabilities of the portal include:

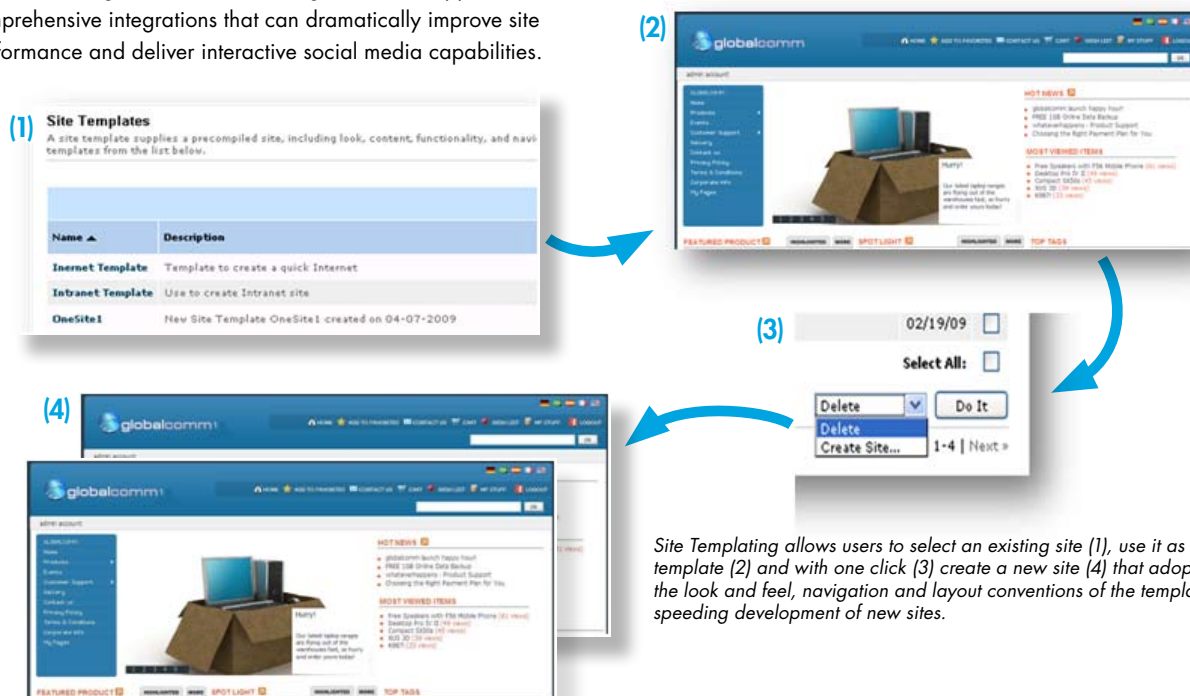

- Out-of-the-box Productivity with Rapid Site Creation & Maintenance
- Easy Custom Application Creation & Integration
- Simplified Management of Multiple Portals & Applications
- Robust Personalization & Secure Delivery
- Enterprise-Class Availability to Support WWW Demands
- Integration with Additional Elements that drive compelling Web experiences

With Vignette Portal, customers can enjoy ease of use and efficiency while continuing to benefit from strong standards support and comprehensive integrations that can dramatically improve site performance and deliver interactive social media capabilities.

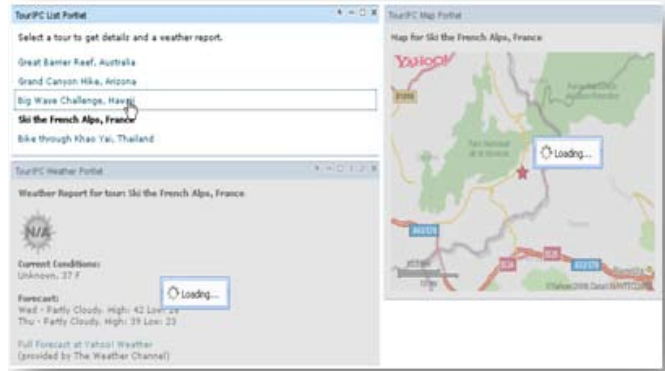

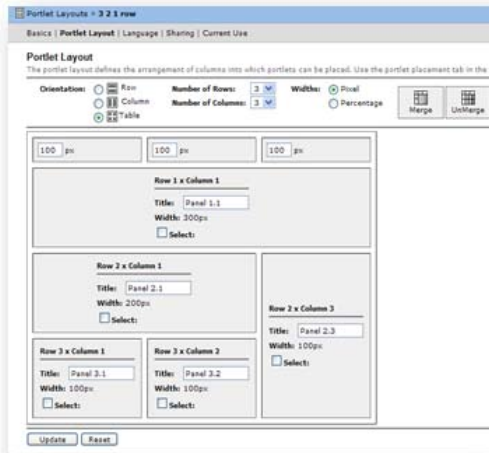

Vignette Portal has been enhanced to improve agility and streamline administration tasks while enabling significant content and rich internet application reuse. Key capabilities include the ability to:

- Easily configure and integrate portlets or Web applications based on Vignette Portal within virtually any Web site
- Minimize page refreshes through AJAX-powered portlets that enable users to interact dynamically with applications and content items as they change
- Rapidly and easily create microsities or clone Web sites with one-click Web site creation from a template or existing site
- Reduce the time and effort needed to customize multiple portals via reusable components called rapid integration portlets

Vignette Portal, the presentation foundation for the Vignette Social Media solutions, provides organizations with more than 100 social portlets that add capabilities such as wikis, blogs, idea-sharing and event calendars to any Vignette Portal site. Additionally, Vignette Portal provides robust presentation services to Vignette Content Management. The result is an ECM solution that combines enterprise assets and social content, further integrating valuable information and resources for Web site visitors. Consider deploying Vignette Portal as your presentation framework for business needs ranging from high volume public web sites that increase revenue to internal business process or enterprise intranet portals that drive productivity.

Site Templating allows users to select an existing site (1), use it as a template (2) and with one click (3) create a new site (4) that adopts the look and feel, navigation and layout conventions of the template, speeding development of new sites.

Portal layout management allows users to easily apply a variety of page layouts via visually intuitive tools that employ common conventions, such as merge / unmerge cells, used in many popular business tools.

AJAX capabilities enable rich interaction between portlets and ensure that end users refresh only as needed. In this example, when a user changes the location being viewed in one portlet, the other portlets respond to the change in context by updating maps and weather to reflect the new location. These portlets each load at an independent pace so the end user doesn't have to wait for a full page refresh

FEATURES:	BENEFITS:
Site Templating & Flexible Design	Speed the delivery of new sites and microsites by creating a Site Template from an existing Site that can later be used to create similar sites with a single click. Leverage a business user interface to create flexible and reusable portlet page layouts for rapid site creation and modification.
Simple Portlet Syndication	Extend the reach of your content across the web. Embed portlets in any website using JavaScript by exposing embed code to end users via simple portlet configuration.
High Performance Delivery (HPD) Integration*	Set caching parameters for HPD within the Vignette Portal console to help organizations with high-traffic, high-content sites improve dynamic performance, make sites more scalable and control costs.
Social Media Integration*	Leverage popular social computing capabilities, like blogs, wikis, rating, ranking, tagging, etc. as part of a modular and extensible platform solution for an improved and interactive user experience.
Composite Application Builder	Empower business users to create composite applications with a GUI-driven, SOA/WSRP based application development tool.
Advanced Search & Taxonomy	Integrate out-of-the-box federated search and taxonomy management to deliver relevant and secure search results. Supported technologies include Microsoft Exchange, Microsoft SharePoint, Lotus Notes, Oracle, and eRoom, as well as existing search technologies within your organization.
Multiple Web Site & Portal Management	Centrally manage all portals from a unified roles-based management console, while allowing delegated administration for the individual portals.
Multi-device delivery	Deliver content to a customer's PDA, cell phone or other device of choice for a pervasive Web experience.
JSR 286 & WSRP 2.0	Improve user experiences by enabling inter-portlet communications, web services integration and display of 3rd party portlets in an integrated, contextual way. Take advantage of Open Text's commitment to supporting interoperability and vendor choice to provide the lowest total cost of ownership.
Audit Log & Activity Reporting	Enhance security and auditing of site activity via a native reporting interface that reports on site modifications.
Rich Ajax Portlet Creation	Enhance end user experiences with dynamic and quick loading pages. Enable portlets to render dynamically via Ajax, without full page refreshes and without writing a single line of code.

FEATURES:	BENEFITS:
Dynamic Personalized Content & Services	Create a more engaging experience by letting business users target content from numerous repositories based on dynamic user segments.
Extensive Internationalization	Globalize your web presence with extensive internationalization for both portal end-users and administrators to support diverse audiences and work groups.
Comprehensive Support for Accessibility	Create portals that are compliant with the Congressional Rehabilitation Act, Section 508 (self-assessed using the Voluntary Product Accessibility Template supplied by the Federal Government).
Personalized Portal Command Center	Create intuitive and configurable roles using the permissions-based management console that allows diverse, multi-dialect administrators to manage virtually all of their portal objectives.
End User Portlet Administration	Empower end users, when authorized, to administer and deploy portlets, helping to speed portlet updates and keep content fresh.
Navigation Item Import/Export	Update live sites faster via incremental item changes instead of import/export of the entire navigation tree.
Command Line Import/Export	Quickly import/export components, categories of components or versions of components using batch processes.
Site and Application Portability	Package entire Web sites, portals, applications and their components, to facilitate delivery between development, staging and testing.
WebDAV Support	Enhance productivity by allowing Web Developers to use WebDAV connections to their preferred tools, like Dreamweaver, to update web assets.
Productivity Application Portlets	Utilize pre-defined portlets that allow rapid site creation of portals with common functionality that is integrated with existing applications and data.
Content Access Management Portlets	Use packaged application portlets that enable teams to share, permission (read/write) and publish portal documents as part of any business process.
Superior Platform Support, Stability and Availability	Enjoy confidence in the large array of Operating System and Application Server combinations for deployment flexibility, including comprehensive caching capabilities, application fail-over, and load balancing for the most mission critical portal initiatives.

**High Performance Delivery and Social Media are sold separately. Please contact your sales representative to discuss purchasing these solutions for rapid integration with Vignette Portal.*

Find Out More About Vignette, Open Text and our ECM Suite of Products

Vignette is proud to be a part of Open Text, the market leader in providing Enterprise Content Management (ECM) solutions that bring together people, processes and information. Together, our software seamlessly combines collaboration with content management, transforming information into knowledge that provides the foundation for innovation, compliance and accelerated growth. For more information about our products, solutions and their demonstrated value to organizations in virtually every industry, please visit www.opentext.com or call + 1-800-499-6544.
